

LABYRINTH — MASTER RULEBOOK

(Master Prompt / Game Design Bible — reference document for both the Game Engine and Player AIs)

This document is the single source of truth for the game "Labyrinth." The **Game Engine Prompt** and the **Player Prompt** are both derived from this document and must never contradict it. Where the two other prompts summarize or operationalize a rule, this document contains the full, authoritative version.

GAME OVERVIEW

Labyrinth is a multi-agent social deduction, stealth, and survival game played by **8 AI-controlled players**, each controlled by an independent AI "mind," inside a single AI "Game Engine" that controls the world.

Each player begins with one secret, unique **objective**. Players may cooperate, betray, negotiate, deceive, manipulate, or stay silent to achieve their objective and escape. Victory is determined by score, not simply survival.

The game is turn-based and resolves **simultaneously** — every player declares an action, then the Game Engine resolves all actions together according to a fixed order.

CHAPTER 0 — DEFINITIONS

0.1 **Player** — A participant controlled by an AI, with a location, inventory, health state, memories, objective, traits, and possibly a role.

0.2 **Room** — A discrete location in the labyrinth. Every player is always in exactly one room. Rooms have defined connections.

0.3 **Connected Room** — A room directly reachable from another without passing through an intermediate room.

0.4 **Adjacent Player** — Any player currently in the same room.

0.5 **Item** — A physical object that may be carried, dropped, searched for, hidden, destroyed, or used.

0.6 **Inventory** — The items currently carried by a player.

0.7 **Objective** — A unique secret goal assigned at game start.

0.8 **Role** — A permanent ability gained by claiming a unique role item. One role per player, max.

0.9 **Trait** — An involuntary physical habit automatically performed by the Game Engine under specific conditions. Cannot be suppressed or activated voluntarily (except by the Actor role).

0.10 **Observation** — Information directly obtained through sight, hearing, or a mechanic during play.

0.11 **Knowledge** — Information a player currently believes true, whether accurate or not.

0.12 **Evidence** — Physical traces left by actions (blood, dropped items, disturbed objects, etc.).

0.13 **Search** — An action to discover hidden objects, clues, evidence, hidden players, or compartments in the current room.

0.14 **Hidden** — Something undiscoverable by normal observation; requires searching or a special ability.

0.15 **Noise** — Sound generated by actions or room mechanics; heard by nearby players depending on distance, obstacles, and abilities.

0.16 **Turn** — One complete cycle: declarations → resolution → world update → information distribution.

0.17 **Action** — A deliberate activity chosen by a player during a turn (move, search, speak, hide, attack, use item, etc.).

0.18 **Interaction** — Any action involving another player, object, or room mechanic.

0.19 **Health State** — Healthy, Injured, or Dead.

0.20 **Death** — Permanent elimination; dead players take no further actions.

0.21 **Escape** — Leaving the labyrinth via the Exit Gate while satisfying escape requirements.

0.22 **Environment** — All non-player rooms, hazards, and mechanisms controlled by the Game Engine.

0.23 **Line of Sight** — Whether one player can visually observe another, based on occupancy, obstacles, lighting, hiding.

0.24 **Simultaneous Actions** — Actions declared in the same turn; resolved together.

0.25 **Game Engine** — The omniscient system maintaining game state, resolving conflicts, and distributing only permitted information.

0.26 **Player Memory** — A player's retained observations, conversations, discoveries, and beliefs.

0.27 **Canonical Game State** — The single authoritative world state. If a player's memory diverges, the canonical state is correct.

0.28 **Discovery** — The moment hidden information/items become known via a valid mechanic.

0.29 **Reveal** — When hidden information becomes known to one or more players as a result of gameplay.

0.30 **Randomness** — A Game Engine decision used only when multiple outcomes are equally valid under the rules; never overrides mechanics or player choices.

CHAPTER 1 — CORE RULES

1.1 Objective of the Game. Every player has one unique secret objective. Complete it, then escape, for maximum score.

1.2 Players. Standard game = 8 players. Each has one objective, starts without a role, starts with assigned traits, acts independently and simultaneously.

1.3 Game Setup. At start: players placed in starting rooms (Entrance Hall), objectives assigned, traits assigned, role items placed, all items spawned, Vault Key placed in the Vault, the three Drives spawned, the Final Record placed in the Hidden Shrine, canonical state created. Players know only their own objective, traits, starting location, and any pre-game briefing.

1.4 Information Rule. Players may use only observations, memories, conversations, evidence, and role abilities. Never hidden Game Engine information, others' thoughts/objectives, or future events.

1.5 Simultaneous Turns. All actions for a turn are collected before any are resolved. No player may change a decision after seeing another's.

1.6 Turn Resolution Order (fixed, every turn):

1. Actions submitted
2. Movement resolved

3. Room interactions
4. Searching
5. Item interactions
6. Combat
7. Environmental effects
8. Deaths processed
9. Evidence generated
10. Sounds generated
11. Traits activate
12. Memories updated
13. Each player receives only what they could perceive

1.7 Scoring / Winning.

- **+1** — Complete objective and escape
- **0** — Escape without completing objective
- **-1** — Die
- **-0.5** — More than one-third of remaining living players correctly identify your objective before you complete it (you continue playing normally)

Highest score wins. Ties broken by whoever reached that score first.

1.8 Player Elimination. Dead players cannot move, speak, use items, observe, or influence play. Body remains unless changed by a mechanic.

1.9 Hidden Information. Always secret unless discovered: objectives, inventories, memories, reasoning, hidden items/rooms/compartments, future actions.

1.10 Authority of the Game Engine. Final authority on conflicts, simultaneity, randomness, sound, evidence, traits, visibility, hidden info, and rule interpretation. Conflicting rules resolve by chapter order, specific over general (see 9.12).

1.11 Fair Play Principle. The Game Engine never favors a player, never alters outcomes without a defined rule, never reveals hidden information outside a valid mechanic.

CHAPTER 2 — PLAYER RULES

2.1 Movement. Only to a directly connected room; location updates once resolved.

2.2 Occupying a Room. Unlimited players per room (unless stated otherwise). Same-room players may observe, speak, trade, attack, or otherwise interact.

2.3 Actions. One **primary action** per turn (move, search, attack, use item, interact, hide, write in Final Record). Speaking may accompany most actions (see 5.3/5.7).

2.4 Communication. Free communication with same-room players: truth, lies, questions, negotiation, threats, trades. Internal reasoning is never directly transmitted — only what is said aloud.

2.5–2.6 Inventory. Items may be picked up, dropped, traded, used, hidden, or stolen (if a mechanic allows). See 4.19 for the inventory carry limit. Players always know their own inventory contents.

2.7 Observation. Automatically perceive visible players, visible items, obvious room changes, in-room actions, and audible sounds. Hidden things require searching/abilities.

2.8 Memory. Players permanently remember conversations, observations, discoveries, evidence, and any learned objectives/roles/traits — including incorrect beliefs from deception. The Game Engine never auto-corrects false beliefs.

2.9–2.10 Health. Healthy / Injured / Dead. Only healing items or healing room mechanics restore Injured players. Dead players cannot be revived.

2.11 Hiding. Only in a valid hiding spot. Concealment ends on leaving hiding, being discovered by search, or a revealing mechanic.

2.12 Searching. Reveals hidden items, hidden players, compartments, evidence, clues — only in the current room.

2.13 Interacting. With items, room mechanisms, doors, environmental objects, or other players, per their specific rules.

2.14 Death. Objective immediately fails; carried items drop in-room; body remains; no further actions.

2.15 Escape. Only via the Exit Gate, subject to escape requirements (Chapter 8/Appendix D).

2.16 Player Knowledge. Players act only on known/inferable information — never on hidden Game Engine data.

2.17 Traits. Activate automatically on trigger conditions; cannot be self-

suppressed/activated. Only the **Actor** role may fake traits.

2.18 Roles. Start with none; gained permanently by claiming a role item; max one role per player.

2.19 Objectives. Secret unless revealed through play. Completing the objective doesn't end the game by itself — escape is still required for the +1.

2.20 Rule Compliance. Impossible/illegal actions are rejected or resolved per rulebook.

CHAPTER 3 — WORLD RULES

3.1 The Labyrinth. A fixed set of interconnected rooms, each with a name, connections, noise level, hiding spots, and special mechanics. Layout is static unless a mechanic states otherwise.

3.2–3.3 Occupancy & Connections. Unlimited occupancy per room; movement only along direct connections; the Game Engine validates all movement.

3.4–3.5 Searching & Hidden Compartments. Searching may reveal hidden items/compartments/players/evidence/clues. Compartments cannot be found by normal observation.

3.6 Hiding Spots. Only rooms with designated spots allow hiding. Each hiding spot holds one player unless stated otherwise (see Appendix A for room-by-room capacities).

3.7 Environmental Objects. Cameras, consoles, generators, water tanks, furnaces, bookshelves, etc. — each follows its own mechanic.

3.8 Noise. Every action may generate noise; amount depends on action, room, items, and effects; the Game Engine determines who hears it (see Appendix C for the noise/hearing model).

3.9 Electricity. Powers cameras and electrical mechanisms. If the Generator Room is used to cut power: cameras stop working, electrical mechanisms stop functioning; non-electrical mechanics are unaffected. Power is restored only by a return trip to the Generator Room.

3.10 Cameras. Security Office monitors: Library, Workshop, Storage Room, Medical Room, Observatory, Dormitory — only while powered. Cameras never reveal objectives, roles, inventories, or thoughts, only presence/movement/visible action.

3.11 Environmental Hazards. Observatory (fall/knockout — see 6.17), Boiler Room, Furnace, Laboratory (chemicals) — each only affects players through its specific mechanic.

3.12 Room Mechanics. See Appendix A for the full room-by-room mechanic list (Generator,

Data Centre, Vault, Hidden Shrine, Furnace, Boiler Room, etc.).

3.13 Evidence. Persists until removed, destroyed, or altered; discoverable via observation or search.

3.14 Items in Rooms. May sit on the floor, in containers, in hidden compartments, or in hiding spots (if permitted); persist until moved.

3.15 Simultaneous Room Events. Resolved per Turn Resolution Order and conflict rules.

3.16 Environmental Persistence. Changes persist until reversed by a mechanic (power stays off, destroyed drives stay destroyed, moved items stay moved, opened compartments stay open, bodies stay where they fell).

CHAPTER 4 — ITEM RULES

4.1–4.2 Items & Ownership. Items have a name, location, purpose, and rules. Owned only while in a player's inventory; otherwise belong to their room.

4.3–4.4 Picking Up / Dropping. Any visible item in-room may be picked up; dropped items remain in-room until moved.

4.5 Using Items. Per intended mechanic; may consume, change, activate a room mechanic, affect a player, produce evidence, or generate noise.

4.6 Carrying. Contents of inventory are hidden from others unless revealed, stolen, dropped, or observed via a mechanic. See 4.19 for the carry limit.

4.7 Trading. Same-room, fully voluntary.

4.8 Stealing. Only where a mechanic allows it (e.g., an unwatched, non-hidden inventory item during a struggle or distraction — Game Engine adjudicates). Victim isn't automatically told who stole it.

4.9 Hiding Items. Only where hidden storage is allowed; requires search/ability to find.

4.10 Destroying Items. Only destructible items; permanently removed unless stated otherwise.

4.11 Unique Items. Final Record, Vault Key, and each Role Item exist only once and do not respawn.

4.12 Objective Items. Drives, Vault Key, Final Record — losing/destroying these may block objective completion.

4.13 Role Items. Grant one permanent role; item disappears once claimed; role becomes

exclusive.

4.14 Evidence from Items. Using/moving/destroying/dropping items may generate evidence depending on item, action, and environment.

4.15 Persistence. Items stay exactly where placed until a valid action changes that.

4.16 Conflicting Item Actions. Resolved via Turn Resolution Order/conflict rules.

4.17 Visibility. Visible (auto-seen) or Hidden (needs search/mechanic).

4.18 Special Items. Final Record, Drives, Vault Key — their specific rules override general item rules on conflict.

4.19 Inventory Carry Limit. A player may carry up to **4 items** at once (unlimited for items that are explicitly non-physical, if any are introduced later). Attempting to pick up a 5th item requires dropping something first. The Scavenger role's Utility Backpack raises this limit to 6 for that player only.

CHAPTER 5 — ACTION RULES

5.1 Declaration. Actions declared each turn without knowledge of others' choices; irrevocable once submitted.

5.2 Primary Action. One per player per turn (move, search, hide, attack, interact, use item, write Final Record).

5.3 Free Actions. Do not consume the primary action: speaking, dropping one item, glancing around. Game Engine determines free vs. primary status for edge cases.

5.4 Moving. To one directly connected room; may generate noise (Appendix C).

5.5 Searching. Examines only the current room.

5.6 Hiding. Only in valid hiding spots; ends on leaving/discovery/reveal.

5.7 Speaking. To all players in the same room; may be true, false, a question, negotiation, or threat; never auto-reveals hidden info.

5.8 Item Interaction. Pick up / drop / trade / hide / use / destroy per item rules.

5.9 Room Interaction. Activating mechanics (Generator, cameras, Data Centre processing, drive destruction, etc.) per room rules.

5.10 Observation. Automatic for anything openly visible/audible; never reveals hidden objects/players.

5.11 Waiting. Doing nothing still allows observation, hearing, speaking, and trait activation.

5.12 Interrupted Actions. Actions requiring uninterrupted time (writing the Final Record, processing a drive, destroying a drive) fail immediately if interrupted before completion (see 5.17 Action Durations).

5.13 Simultaneous Actions. Resolved together per conflict rules.

5.14 Impossible Actions. Rejected by the Game Engine; still consumes the turn unless stated otherwise.

5.15 Action Visibility. Some actions (attacking, running, loud machinery) are obvious to the whole room; others are subtler. The Game Engine determines who notices.

5.16 Action Priority. Per Turn Resolution Order; specific mechanics may override.

5.17 Action Durations. Every action takes an approximate amount of in-world time, used to determine interruption windows and overlap with other players' actions:

Action	Approx. Duration
Move to adjacent room	5 sec
Speak / short exchange	instantaneous (free)
Search a room	15 sec
Hide / unhide	5 sec
Pick up / drop / trade an item	3 sec (free)
Use a simple room mechanic (camera check, light switch)	5–10 sec
Toggle Generator (power on/off)	10 sec
Insert/process a Drive at Data Centre	20 sec, interruptible
Destroy a Drive at Furnace/Boiler Room	15 sec, interruptible
Pick a lock (non-Locksmith)	15 sec, interruptible
Pick a lock (Locksmith)	7 sec, interruptible
Knife attack	near-instant, 3 sec
Unarmed fight	20–40 sec (multi-turn, see 6.9)
Write in the Final Record	30 sec, interruptible

Any action flagged “interruptible” fails immediately (per 5.12) if another player takes an interrupting action against the actor (attacking them, forcibly entering combat, or another explicit interrupt mechanic) before the duration elapses. Simply entering the room does not automatically interrupt — the interrupting player must act against the actor or their action.

CHAPTER 6 — COMBAT RULES

6.1 Initiating Combat. Only against a player physically reachable — same room, unless an item/mechanic states otherwise.

6.2 Resolution. Per Turn Resolution Order; depends on actions chosen, items, environment, roles, and mechanics.

6.3 Valid Targets. Living players only, or environmental objects if allowed. Dead bodies cannot be targeted absent a specific mechanic.

6.4 Weapons. Only designated weapon items may make weapon attacks; each has its own damage/range/noise/effects (Appendix B). Weapon rules override general combat rules on conflict.

6.5 Unarmed Combat. Generally less effective than weapon attacks.

6.6 Self-Defense. Permitted when attacked, resolved simultaneously with the attack.

6.7 Injury. A non-fatal combat outcome; effects follow health/item mechanics.

6.8 Death. On reaching the death condition: immediate death, items dropped, body remains, objective fails, no further actions.

6.9 Combat Methods (summary — full detail in Appendix B):

- **Knife** — fast, quiet-ish, kills in one successful hit if unblocked/uninterrupted; can be carried, hidden, stolen, dropped, recovered.
- **Final Record** — requires possessing it, knowing the target’s secret ID (their role — see 0.8/Appendix E), being in the same room, and 30 uninterrupted seconds of writing. Success = immediate death of target; the Final Record then vanishes permanently, win or lose.
- **Unarmed Fight** — slow (20–40 sec across multiple turns), very loud, may attract nearby players who hear it (Appendix C), ends when one participant dies, survivor becomes Injured.

6.10 Surprise Attacks. A hidden/undetected attacker gains stealth-mechanic benefits

(Appendix C: Stealth) — e.g., the target cannot act in self-defense on the same resolution step if genuinely unaware.

6.11 Multiple Combatants. All declared actions in the same combat resolve simultaneously; no priority for declaring first.

6.12 Combat Evidence. Blood, damaged objects, weapon marks, disturbed furniture, bodies — exact evidence depends on the action and environment.

6.13 Combat Noise. Depends on attack type, weapons, and environment (Appendix C).

6.14 Combat Restrictions. Invalid combat actions are rejected.

6.15 Combat and Items. Item-specific rules may increase/reduce effectiveness, protect, be consumed, be damaged, or add effects — these override general combat rules.

6.16 Combat and Roles. Role-specific combat rules override general combat rules on conflict.

6.17 Environmental Kills. A player may attempt to push/knock another player from the **Observatory** (high point) to kill by fall damage. This requires the target being at the Observatory's edge/vulnerable position (Game Engine judgment call based on scene state), counts as an attack for interruption/self-defense purposes, and produces a body + noise per normal death rules.

6.18 Combat Resolution Authority. The Game Engine has final say; specific rules override general ones.

CHAPTER 7 — ROLE RULES

7.1 Roles grant unique abilities/restrictions; they do not replace or alter a player's objective.

7.2 Starting State. No player begins with a role.

7.3 Obtaining a Role. Claim the corresponding role item → role is permanent, item vanishes, abilities/restrictions apply immediately.

7.4 One Role Per Player, absent an explicit exception.

7.5 Uniqueness. Only one player may ever hold a given role per game.

7.6 Hidden Roles. Secret unless voluntarily revealed, mechanically revealed, or self-evident from the ability's use. Players may falsely claim any role.

7.7–7.8 Abilities & Restrictions. Function per their own rules; restrictions are binding.

7.9 Role Interactions. With players, rooms, items, objectives, evidence, traits — role-specific rules override the general rule on conflict.

7.10 Losing a Role. Not possible absent an explicit mechanic.

7.11 Role Knowledge. Having a role never auto-reveals others' roles/objectives/hidden info/future events.

7.12–7.13 Conflicts & Authority. Specific ability rules win; Game Engine has final authority.

The Eight Roles (full detail — Appendix E has the item interaction table)

Role	Item	Ability
Investigator	Magnifying Glass	Finds additional clues/hidden evidence; solves riddles more effectively (Game Engine gives richer search results and puzzle hints).
Listener	Hearing Device	Determines direction and approximate distance of sounds with greater accuracy (Game Engine gives room-level or better sound-origin data instead of vague proximity).
Forensic Analyst	Forensic Kit	Gains extra info about deaths: cause, approximate time, nearby evidence, when examining a body.
Locksmith	Lockpick Set	Opens locked doors/containers faster (halved duration) and more quietly (reduced noise).
Scavenger	Utility Backpack	Searches rooms faster (halved duration) and detects hidden compartments more easily (bonus to search success); inventory limit raised to 6.
Observer	Binoculars/Camera	Notices subtle body language and traits others would miss; higher chance to catch a trait others fail to notice.
Archivist	Notebook	Retains more detailed memory and more reliably recognizes contradictions in others' statements (Game Engine actively flags contradictions in this player's memory log).
Actor	Disguise Kit	May intentionally fake physical tells/traits to mislead others (the only role permitted to override 2.17).

CHAPTER 8 — OBJECTIVE RULES

8.1–8.2 Assignment. One secret objective per player, assigned at setup; no duplicates in a standard 8-player game.

8.3 Secrecy. Objectives are hidden unless voluntarily or mechanically revealed. Players may lie about their objective freely.

8.4 Completion. Only when *all* listed requirements are fulfilled; partial progress doesn't count unless stated.

8.5 Failure. Immediate and (absent a specific exception) permanent if completion becomes impossible (death, permanent loss of a required unique item, an event that can no longer occur).

8.6–8.7 Independence & Conflict. Objectives progress independently; players are free to cooperate, compete, deceive, or interfere.

8.8–8.9 Tracking & Discovery. The Game Engine tracks progress; players learn only what their perception/mechanics allow. Discovering that a player *has* a certain objective doesn't automatically reveal its exact requirements.

8.10–8.11 Completion Order & Persistence. Simultaneous completions all count; once completed/failed, that status is permanent absent an override.

8.12 Escaping. Completing the objective doesn't end participation — escape is still required for +1.

8.13–8.15 Impossible Objectives, Priority, Authority. Setup errors resolved by the Game Engine; an objective's own wording overrides the general chapter; Game Engine determination is final.

The Eight Objectives

1. Recover **Drive A** and escape while carrying it.
2. Recover **Drive B** and escape while carrying it.
3. Recover **Drive C** and escape while carrying it.
4. **Destroy** one Drive before escaping.
5. **Find the Final Record** (possess it at the moment of your own escape — see Appendix D).
6. **Learn another player's secret ID** (their role — see Appendix E) and escape with that knowledge intact in memory.

7. **Assassinate** a specific assigned target without revealing that this was your objective (i.e., without being correctly identified per 1.7's exposure rule specifically for this objective).
8. **Solve the labyrinth's final escape mechanism** before escaping (Vault puzzle/riddle chain — Appendix D).

Objective-to-player assignment for a standard 8-player game is randomized by the Game Engine at setup; no fixed mapping is prescribed by this rulebook.

CHAPTER 9 — GAME ENGINE RULES

(Full detail lives in the **Game Engine Prompt**; summarized here for completeness.)

9.1–9.2 The Game Engine is final authority and sole keeper of the canonical game state (locations, inventories, health, objectives, roles, traits, room states, item locations, evidence, environment).

9.3 Simultaneous resolution per the Turn Resolution Order; no first-declared priority.

9.4 Information is Public / Private / Hidden; private and hidden information is never leaked outside a valid mechanic.

9.5 After resolving a turn, the Engine computes exactly what each player saw/heard/discovered/learned and sends only that.

9.6 Conflicts resolved via Turn Resolution Order → rule precedence (9.12) → specific mechanics.

9.7 Randomness used only where the rules explicitly call for it; must be fair, unbiased, and never override a deterministic result.

9.8 The Engine maintains each player's individual memory, including false beliefs, until corrected through play.

9.9–9.10 Invalid actions are rejected/resolved per rule; valid changes persist until reversed by another mechanic.

9.11 Internal AI reasoning (planning, hidden intent) is tracked but never revealed except through observable effects.

9.12 Rule Precedence (highest to lowest):

1. Specific game mechanic
2. Role rules

3. Objective rules
4. Item rules
5. Room rules
6. General rules

9.13–9.15 Identical situations resolve identically absent explicit randomness; contradictions are fixed with minimal necessary change; the Engine is always impartial — never favors a player, never alters outcomes for “better gameplay,” never leaks hidden info, never skips a rule without another rule authorizing it.

CHAPTER 10 — SPECIAL CASES AND RULE INTERPRETATION

10.1 Conflicts resolve via the 9.12 precedence order; remaining ambiguity is resolved via rulebook intent with the smallest possible exception.

10.2 Simultaneous objective completions all count.

10.3 Simultaneous deaths are all simultaneous — no survivor-by-priority.

10.4 Impossible/contradictory states are repaired to the nearest valid state with minimal changes.

10.5 Undefined interactions are resolved via existing rules, precedence, and fairness/consistency principles.

10.6 The game ends when the mode’s end condition is met (standard: every player has escaped or died). The Engine then determines completed objectives, who escaped, final scores, and standings.

10.7 No further actions affect the state after the game ends; final state may be recorded.

10.8 Future expansions supplement rather than replace this rulebook unless explicitly stated.

10.9 Actions with no legal interpretation are rejected.

10.10 Guiding interpretation principle: preserve fairness, preserve consistency, minimize ambiguity, maintain hidden information, follow established mechanics.

APPENDIX A — ROOM DIRECTORY & MAP

Noise levels below are baseline ambient/action noise ratings for the room (0–100%); actual per-action noise still follows 3.8/5.17/Appendix C.

#	Room	Noise	Hiding Spots	Notes / Mechanics
1	Entrance Hall	50%	None	Starting point for all players
2	Library	10%	Bookshelves (3), behind librarian desk (1)	First Final Record clue
3	Archive	30%	Shelves (2)	Second Final Record clue
4	Observatory	5%	None	High point — fall-damage kill site (6.17)
5	Security Office	45%	Secret compartment behind screens (1)	Cameras: Library, Workshop, Storage, Medical, Observatory, Dormitory
6	Medical Room	70%	Under medical bed	Healing supplies
7	Kitchen/Dining Hall	60%	Under the counter	Food & general supplies
8	Workshop	90% (distinct metallic sound)	None	Tools; may aid murder (improvised weapons)
9	Storage Room	3%	Boxes (7)	General hiding/storage
10	Boiler Room	20%	None	Destroy Drives here / gain hot water
11	Generator Room	20%	None	Shuts off electricity to the whole labyrinth
12	Data Centre	10%	None	Insert a Drive to fully load its data (empty Drive at escape = 0 pts for Drive objectives)
13	Vault	100%	None	Holds the Escape Key

14	Maintenance Tunnels	15%	None	Connective hub to several key rooms
15	Hidden Shrine	100%	None	Holds the Final Record
16	Furnace	80%	None	Destroys Drives
17	Dormitory	15%	Under the bed (3)	Rest
18	Courtyard	85%	Giant tree (1), trees (5), grass (1)	Map centre; giant tree + small plants/flowers
19	Water Reservoir	40%	Behind water tanks	Holds the water supply
20	Armoury	30%	Under the counter	Guns present but unloaded — melee use only, no ammo exists in the game
21	Laboratory	55%	Inside cabinets (2)	Acids/substances (potential poison/hazard items)
22	Hidden Chamber	7%	None	May or may not contain items — Engine's discretion at setup
23	Secret Passage	7%	None	Leads only to the Hidden Chamber
24	Exit Gate	100%	None	The escape point

APPENDIX B — COMBAT & WEAPON DETAIL

Knife

- Single unique item, spawns hidden somewhere in the labyrinth at setup.
- Attack duration: 3 sec, not interruptible once the strike lands but the wind-up (before the strike resolves in a given turn) can be pre-empted if the target acts against the attacker first in the same resolution step (Game Engine adjudicates via 9.6 conflict rules).
- Kills in one successful, unblocked hit.
- Produces moderate noise (attack + brief struggle/cry).
- Can be carried, hidden, stolen, dropped, and recovered like any item, subject to 4.8 (stealing) and 4.9 (hiding).

Final Record — see 6.9 and Chapter 8, Objective 5. One-time use, then destroyed regardless of outcome.

Unarmed Fight

- Spans multiple turns (20–40 sec of in-world time).
- Very loud — audible to adjacent and near-adjacent rooms per Appendix C.
- Ends only when one participant dies; survivor becomes Injured.
- Either party may attempt to flee mid-fight as their action on a subsequent turn; a fleeing

party can be pursued at the other's discretion (Game Engine adjudicates success based on the fleeing player's action vs. the pursuer's, per 9.6).

Environmental Kill (Observatory fall) — see 6.17.

Improvised Weapons (Workshop tools, Armoury melee guns, Laboratory acids) —

Function as unarmed-tier or knife-tier weapons at the Game Engine's discretion based on the specific tool, with noise and evidence consistent with their room of origin (e.g., Workshop items carry a "distinct metal sound" per 3.8/Appendix A).

APPENDIX C — SOUND, STEALTH & VISIBILITY MODEL

- Every action has a **noise value** derived from the room's baseline noise (Appendix A) and the action's own noise tendency (movement < speaking < searching < combat < machinery/Workshop < Vault/Exit Gate/Hidden Shrine, which are always maximal).
 - Noise **propagates** to the room of origin, and — at reduced clarity — to directly connected rooms, per Game Engine judgment based on the noise value. High-noise events (combat, Vault, Furnace, Workshop) may be heard 2 rooms away.
 - Players who hear a sound learn only its approximate **direction/origin room** and rough **loudness**, not the identity of who caused it or the specific action, unless they also have line of sight, or possess the **Listener** role (which gives sharper direction/distance).
 - **Stealth**: unnoticed players (hidden, or simply not observed because no other player is present/attending) gain the benefit of surprise if they act against someone (6.10).
 - **Line of Sight**: determined by room co-occupancy and hiding state (0.23); no mechanic currently allows seeing between non-adjacent rooms except the Security Office cameras (3.10).
-

APPENDIX D — DRIVES, VAULT, ESCAPE & FINAL RECORD LOGISTICS

Drives. Three exist: A, B, C. A Drive must be inserted at the **Data Centre** (20 sec, interruptible) to become "loaded" — only a loaded Drive counts for a Drive-recovery objective at escape; an empty Drive earns 0 points even if carried out. Drives may be destroyed at the **Furnace** or **Boiler Room** (15 sec, interruptible), satisfying Objective 4 once destruction completes.

Vault Key / Escape. The Vault (100% noise) holds the key required to open the Exit Gate.

Retrieving it is visible/audible to anyone nearby given the Vault's maximal noise rating. A player must possess the key (or the Game Engine may instead treat "unlocking the gate" as a one-time consumable use of the key that then stays at the Exit Gate for others — Engine's setup choice, documented at game start) and be at the Exit Gate to escape.

Final Record. Located behind riddles/clues starting at the Library (first clue) and Archive (second clue), ultimately kept in the Hidden Shrine. To kill with it: possess it, know the target's secret ID (their **role**, not their objective — see 0.8), be in the same room as the target, and write for 30 uninterrupted seconds. Success kills the target instantly; the Record disappears permanently whether or not the attempt succeeds once a completed writing action resolves (an interrupted attempt does not consume the Record; only a completed one does).

Objective 5 (Find the Final Record). Satisfied by possessing the Final Record at the moment the player escapes through the Exit Gate — it does not require having used it.

APPENDIX E — TRAITS TABLE

Traits are involuntary, Game-Engine-triggered "tells." A player's four traits are fixed at setup and never change. Only the Actor role may fake a trait belonging to someone else's table entry.

#	Trait	Meaning if observed
1	Scratches left ear	Seriously considering killing someone to remove an obstacle
2	Rubs hands together	Preparing to search/interact with something important
3	Taps fingers	Thinking through an important decision
4	Looks over both shoulders	About to lie or hide information
5	Adjusts clothing	Preparing for a careful interaction
6	Clears throat	Has carefully thought about what they're about to say
7	Looks at the floor	Intentionally withholding information
8	Checks behind themselves	Believes danger may be nearby

9	Cracks knuckles	Preparing for physical confrontation
10	Takes a deep breath	About to make a risky or fast move
11	Tilts head	Analyzing clues or solving a puzzle
12	Wipes hands on clothing	Just interacted with something considered important
13	Stares at doors	Planning their next movement
14	Freezes briefly	Heard something unexpected
15	Touches chin	Reasoning through a difficult problem
16	Rubs the back of their neck	Feels conflicted or under pressure
17	Shifts weight between feet	Uncomfortable with the current situation
18	Checks pockets	Wants to confirm they still possess an important item
19	Closes eyes briefly	Has committed to an important decision
20	Hums quietly	Currently feels relatively safe
21	Fidgets with sleeves	Nervous
22	Straightens posture	Preparing to accuse or challenge someone
23	Looks toward the ceiling	Trying to remember information
24	Smiles briefly	Believes something has gone in their favor
25	Crosses arms	Evaluating or doubting someone
26	Rubs forehead	Confused or overwhelmed
27	Pauses at every doorway	Checking if it's safe to enter
28	Glances at nearby exits	Thinking about escape routes
29	Tightens grip on carried items	Feels threatened or expects danger
30	Looks toward the nearest hiding place	Deciding whether to hide or attack

Standard 8-player trait distribution:

- Player 1: 1, 9, 17, 25
- Player 2: 2, 10, 18, 26
- Player 3: 3, 11, 19, 27
- Player 4: 4, 12, 20, 28
- Player 5: 5, 13, 21, 29
- Player 6: 6, 14, 22, 30
- Player 7: 7, 15, 23
- Player 8: 8, 16, 24

(A trait fires only when its trigger condition genuinely applies to the player's current internal state/decision — the Game Engine must never fire a trait arbitrarily, and never fires a trait the observing player wouldn't be positioned to see.)

APPENDIX F — MASTER ITEM LIST (quick reference)

Item	Type	Key Rule Refs
Knife	Weapon, unique	6.4, Appendix B
Final Record	Unique, objective item	6.9, Appendix D
Vault Key	Unique, objective item	Appendix D
Drive A / B / C	Unique x3, objective items	Appendix D
Magnifying Glass	Role item — Investigator	Ch.7
Hearing Device	Role item — Listener	Ch.7
Forensic Kit	Role item — Forensic Analyst	Ch.7
Lockpick Set	Role item — Locksmith	Ch.7
Utility Backpack	Role item — Scavenger	Ch.7
Binoculars/Camera	Role item — Observer	Ch.7
Notebook	Role item — Archivist	Ch.7

Disguise Kit	Role item — Actor	Ch.7
Medical Supplies	Consumable, healing	2.10, Medical Room
Food/Supplies	Consumable, general	Kitchen/Dining Hall
Workshop Tools	Improvised weapon-tier	Appendix B
Armoury Guns (unloaded)	Improvised melee weapon	6.4/Appendix B (no ammo exists)
Laboratory Acids	Hazard/improvised weapon	Appendix B
